

Optima Cast Pig

Optima Cast Pig
Split Disc

Optima Cast
Cup Pig

Description

The Optima Cast Pig allows the pipeline operator to select any combination of S.U.N. Engineering's cups or discs in any desired configuration, whether it is a cup-disc-disc-cup design, multi-size cups, or paraffin cups, to create a 1 piece cast pig (up to 6 sections). This setup allows for greater flexibility in any pipeline operation's pigging program. Along with different cup and disc options, brushes, magnets, and transmitters can be included in the configuration as well. The Optima Cast Pig utilizes the same long lasting MDI urethane that S.U.N. Engineering uses for all of its urethane products. The LN10 formulation polyester MDI urethane used by S.U.N. Engineering is renowned for its superior wear properties, making S.U.N. urethane products more economical than those of its competitors.

Options

- Limitless configurations of cups and discs
- Brushes, magnets
- Bidirectional or unidirectional
- Cavity options available for transmitters
- Handling ropes or straps
- Several durometer hardnesses
