

# Super Mandrel Pig

2" – 48"

**BD6BR**

## Description

S.U.N. Engineering, Inc.'s Super Mandrel pigs use the same durable urethane scraper components that we use on our all urethane pigs, mounted on a steel body, making our Super Mandrel pig the longest lasting metal body pig on the market. It consists of a steel mandrel body with simple and easy to replace sealing elements such as cups and discs. All Super Mandrel pigs can be equipped with brushes (spring-loaded or circular) for removing debris and other deposits from the interior pipe wall. The metal body can be constructed with any number of options including special lengths and diameters, gauging plates, articulated joints, transmitter cavities, and magnet packs, depending on your specialized pigging needs.
